Academic Project Details:

Title: MBUDDY: A POS APPLICATION FOR FOLLOWING STOCK AND EXCHANGES.

Problem Statement:

JK Collection is a cloth retailer store, located at Bangalore. The store is very popular for selling different types of cloths and accessories. They are maintaining different type of items. So, they need to check every day how much sales and purchase is going on. It is hardly to find out every day because they need to write down all the records in a record book manually.

Solution Implement:

Here i build up a framework MBUDDY windows structure POS application to overcome their problems. It will help them overcome their short falls. According to their requirements it has to be developed offline.

Technology Used:

- Visual Studio .Net 2019(IDE)
- MYSQL Work Bench(Database)
- C-Sharp
- ADO.NET

Description:

The MBUDDY is ability to store every one of the exchanges and performing by certain activities? At whatever point the retailer needs to check what number of offers and buy going on every day. With this goal as a top priority, I have arranged and made freely accessible high-recurrence datasets containing almost long periods of real exchanges and clerk activities from a fabric store having a place with the retailer. This dataset can give bits of knowledge on how the power and span of checkout activities change for the duration of the day, week, and months.

Additional Technical Set:

- Knowledge on **C Programming Language: Variables, Control Structures, Arrays, Pointers, Multidimensional Arrays Using Pointers, Structures and Unions, Recursion, Storage Classes, Basic Concepts of Data Structures in C.**
- Knowledge on **Selenium Testing** by using **Third-Party Applications.**
- Bit of knowledge on **Python, AI and Design Patterns.**
